

# Compatibility Report

2025-04-21 14:32:52

System

Criteria Pass:   Material: Both the reference and candidate components use the same materials for the connector: PBT for the housing and Copper Alloy with Gold plating for the metal parts. This indicates full compatibility in terms of material composition.

2025-04-21 15:32:52

System

Not a match:   Number of pins: The reference component has 4 pins, while the candidate component has 5 pins. For connectors, the number of pins must match exactly to ensure compatibility. Therefore, the candidate component is not compatible with the reference component.
